

Industrial risks, including more highly toxic fires, are on the rise, so users require increasingly high-performance professional equipment. MATISEC meets their needs by designing, developing and manufacturing self contained breathing apparatus (SCBAs) that are hardy, ergonomic and include the latest technologies.

GPAL-QS

The GPAL QS is a SCBA benefiting from all the technological advances on respiratory quality of high pressure and demand valve. Its sturdy frame made of polyamide reinforced with fiberglass gives it strength and resistance to extreme temperatures while being very light to the user. Complies with EN 137-1, EN 137-2, flame engulfment.

Breathing air shelter

The mission duration time and cylinder needs increase more and more and forced the fire brigade to re fill on site cylinders.

High pressure rack

More compact and less expensive than a compressor shelter our proposal is to manufacture high capacity mobile high pressure storage.

High pressure compressors

The breathing Air high pressure compressor range is results of BARGAZ Company buyout.

Breathing air trolleys

In case of emergency requiring SCBA, CHEMICAL SUIT, BAIL OUT or ESCAPE HOOD additional breathing air needs could appear.

Inverter KIT 3S

This kit allows to work on an external air source and so make the SCBA air line connected to save autonomous cylinder duration.

DM SUIT

The DM protective suit is composed of an envelope inside which a SCBA and its mask (type 1 a) can be used.

GR3 SUIT

The GR3 reusable suit provides protection from liquid and gaseous chemical products (aerosols, liquids and solid particles).
