

Industrial risks, including more highly toxic fires, are on the rise, so users require increasingly high-performance professional equipment. MATISEC meets their needs by designing, developing and manufacturing self contained breathing apparatus (SCBAs) that are hardy, ergonomic and include the latest technologies.

Escape device M20.2

The emergency escape breathing device M20.2 is the world's smallest....

Compact light and reliable, it can be worn comfortably on belt or stored in its orange container. Much more efficiency than a filtering escape device the compressed oxygen and mouthpiece combination allows the M-20.2 to be donned in a smoke filled and toxic gases environment.
