

Matissec design and manufacture ventilated PPE to protect people working in contaminated environments. We use flame-retardant, reinforced materials and high-tech plastics to continually enhance the reliability of our protective suits. All our protective suits and hoods meet the requirements of applicable standards, EN 1073-1, EN 943, EN 270.

## PK17 PMI reinforced

The PK17 PMI reinforced, used in main activities of maintenance in contaminated area, offers a very high level of protection and comfort all round. This suit has the same advantages as the MRV5 but the user's respiratory tract is better protected because this PPE includes an EN136 - compatible mask and filtering cartridge. It meets the requirements of standard EN1073-1 by providing a protection factor superior to 50 000 ppm.

The PK17 PMI hold is thicker than the PK17.

▶ **Non-slip slippers**

Made of PVC, resistant to abrasion.

▶ **Quick lacing**

Facilitates dressing.

▶ **P40 system / Integrated mask**

The P40 system easily connects to the air inlet of the hood, thanks to a quick connection. The hose is equipped with a filter and a screw-on coupling in accordance with EN 141.
