

Industrial risks, including more highly toxic fires, are on the rise, so users require increasingly high-performance professional equipment. MATISEC meets their needs by designing, developing and manufacturing self contained breathing apparatus (SCBAs) that are hardy, ergonomic and include the latest technologies.

GPAL-INCURVE

The GPAL-INCURVE is simple in construction, compact and sturdy. The respiratory system is quick and easy to put on. To make the harness easier to clean, the GPAL-INCURVE has a system for quickly removing the air supply tube without tools.

GR3 SUIT

The GR3 reusable suit provides protection from liquid and gaseous chemical products (aerosols, liquids and solid particles).

DM SUIT

The DM protective suit is composed of an envelope inside which a SCBA and its mask (type 1 a) can be used.

Inverter KIT 3S

This kit allows to work on an external air source and so make the SCBA air line connected to save autonomous cylinder duration.

Breathing air trolleys

In case of emergency requiring SCBA, CHEMICAL SUIT, BAIL OUT or ESCAPE HOOD additional breathing air needs could appear.

High pressure compressors

The breathing Air high pressure compressor range is results of BARGAZ Company buyout.

High pressure rack

More compact and less expensive than a compressor shelter our proposal is to manufacture high capacity mobile high pressure storage.

Breathing air shelter

The mission duration time and cylinder needs increase more and more and forced the fire brigade to re fill on site cylinders.
